

FOR IMMEDIATE RELEASE

Enigma Data Solutions, Ltd. announces the release of *PARS 3*

Complex Archiving Made Simple

SUSSEX, UK / HOUSTON, TX, US – SEPTEMBER 28, 2005 –

Enigma Data Solutions today announced a major upgrade to its Enterprise Archiving and Backup product PARS.

PARS has a unique approach to the capture of important information for backup, long term archiving for compliance and corporate governance.

PARS is designed to capture information from multiple information sources including Applications, Databases, Ad-Hoc file/directory structures wherever they reside in your organisation. This information is pulled together to be stored, securely and centrally.

The value of this information is greatly enhanced by the simultaneous capture of associated MetaData This not only enables accurate archive searches but can also provide enough information to negate the need to restore any bulk data.

PARS has configurable free-text, manual & automatic metadata collection methods. Descriptions for each archive can be captured with pre-loaded standard lookups to enable accurate future searches. Automatic methods decrease the possibility of user input errors and inconsistency.

PARS was originally developed to archive the high volumes of complex Oil Exploration and Production data in the Oil and Gas Industry where it has now become the proven industry standard solution. PARS 3 will be available to the Global Market in November 2005.

PARS 3 Fundamentals At-a-Glance:

- allows capture of all relevant information in one place
- protects archived data and ensures authenticity
- helps describe each piece of information – manually or automatically
- Produces extensively described, well conditioned archives using corporate naming standards

PARS 3 Enhancements At-a-Glance (over PARS 2):

- Completely re-architected solution utilizing J2EE
- Modern, Simplified User Interface
- Simplified Application Integration
- Increased MetaData capability
- Increased RDBMS Support (including Oracle and MySQL)
- EMC Centera Interface and IBM DR550 Interface

ABOUT ENIGMA DATA SOLUTIONS, LTD

Enigma Data Solutions is a leading provider of data management software worldwide. Enigma uses its products to address the data storage demands of businesses across vertical markets.
