

PARS Project Archiving

Application Aware Complex Archiving Made Simple

Decisions are based on information from many disciplines and applications. This information maybe resident on multiple systems. PARS allows you to capture all this information in one place. PARS allows you to comprehensively describe this information for future reference. PARS protects archived data and ensures authenticity. PARS helps you describe each piece of information-manually or automatically. PARS helps you implement standard naming conventions for archiving metadata. Most of all PARS helps you find and restore important data rapidly.

Why

- Store complete knowledge of project decisions.
- Regulatory compliance (or unregulated governance).
- Query information without necessarily restoring.
- Free up precious disk space.
- Verified integrity of data in archive.

What

- Application's view of the data.
- Comprehensive Manual and Automatic MetaDataa

When

- Project Checkpoints, Project Completion.
- Pre Application Upgrades.

What

- Application/User's view of the data.
